**ADVISORY BOARD MEETING
COMMUNITY REDEVELOPMENT AGENCY**

April 14, 2009

Ward I, Phase II, Change Order No. 1

SUMMARY

The CRA has completed “Ward I, Phase I”, an infrastructure project designed to bring water, sewer, and reclaimed water lines to current standards, to install an appropriate stormwater system and sidewalks, and to repave streets. This project area is marked in **orange** on the attached map.

On November 14, 2007 the CRA Board approved the improvements necessary for identical upgrades for “Ward I, Phase II”. The City Commission approved this project on June 16, 2008. The total cost of design was contracted to be \$400,000, and engineering is approximately 20% complete. The project area for the current contract is identified in **green** on the attached map.

Staff recently noted that, because infrastructure at Oakridge Apartments on 13th and 14th Streets West (project area identified in **blue** on the attached map) was overhauled within the last decade, it would not be practical for the next phase of improvements to be immediately adjacent to the current project area.

In fact, 12th Street Drive West (identified in **pink** on the attached map) should be a part of the Ward I, Phase II project. Including this street at this time will not only ensure the seamless integration of adjacent infrastructure systems, but will also eliminate the replication of costly mobilization fees associated with construction.

Staff contacted GWE and requested a proposal for a Change Order that will include the design of infrastructure improvements in the current project.

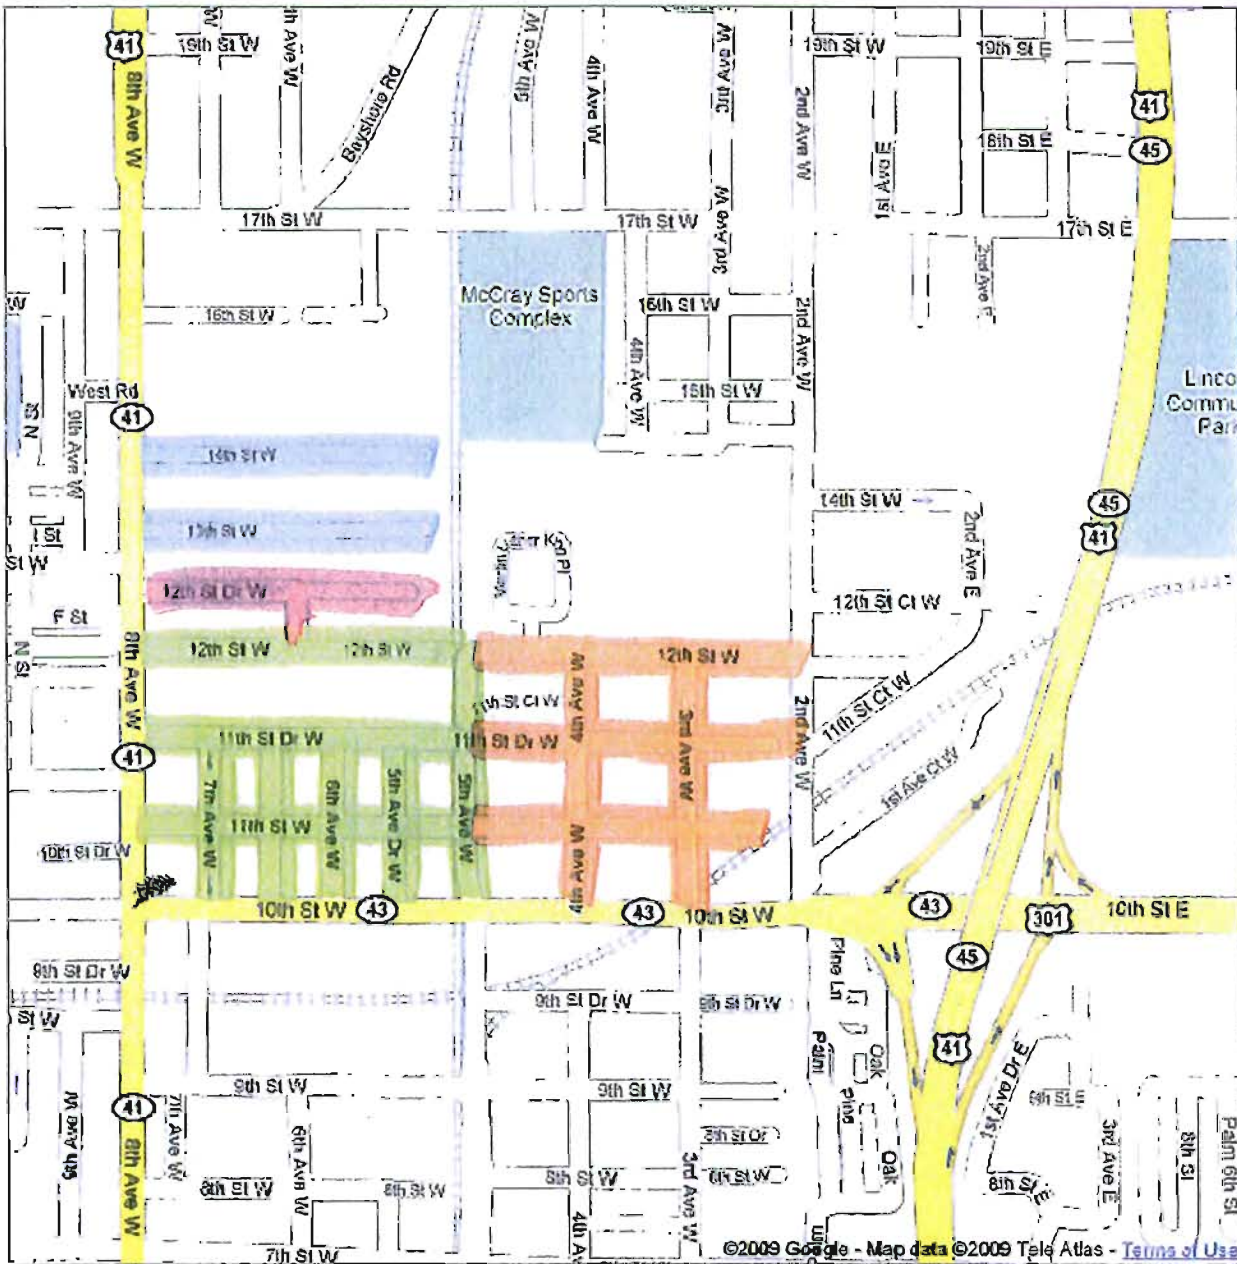

REQUIRED ACTION: The Advisory Board should make a recommendation to the CRA Board as to whether to include 12th Street Drive West in the “Ward I, Phase II” project, and to execute Change Order #1 for the Engineering Services as attached.

WARD I PHASE I - COMPLETE

WARD I PHASE II - ENGINEERING UNDERWAY

OAKRIDGE APTS - NEW INFRASTRUCTURE (\$2000)

12th ST DR W - SUBJECT OF CHANGE ORDER

March 24, 2009

Mr. Frank Woodard, II, Deputy Director
City of Palmetto – Public Works Department
600 17th Street West
Palmetto, FL 34221

**RE: CITY OF PALMETTO - WORK ASSIGNMENT NO. 4/CHANGE ORDER NO. 1
WARD 1 PROJECT – PHASE II, 6TH AVENUE WEST & 12TH STREET DR. WEST
COP JOB NO. 05-436 GWE JOB NO. 5901.00**

Dear Mr. Woodard:

Pursuant to the instructions contained in your March 24, 2009 e-mail, we have enclosed three executed sets of the above-referenced Change Order No. 1.

It is our understanding that once all signatures have been obtained, our office will receive a fully executed set of the Agreement for our records.

Thank you for your assistance in this matter.

Kindly contact me should you have any questions or if I can be of further assistance.

Sincerely,

GIFFELS-WEBSTER ENGINEERS, INC.

Jonathan H. Cole, P.E., President

**GIFFELS-WEBSTER ENGINEERS, INC.
WORK ASSIGNMENT NO. 4
CHANGE ORDER NO. 1**

Pursuant to the City of Palmetto Agreement for Professional Engineering Services, entered into by and between the CITY OF PALMETTO (City) and GIFFELS-WEBSTER ENGINEERS, INC. (Consultant <or> ENGINEER), the City hereby authorizes the following professional services under said Agreement:

TITLE OF PROJECT: **Ward 1 Project- Phase II
6th Avenue West and 12th Street Dr. West
COP Job # 05- 436**

DESCRIPTION OF AUTHORIZED SERVICES:

The following scope of services amends Work Assignment No. 4 for additional engineering services associated with the final design, permitting and construction services for infrastructure improvements including roads, sidewalks, drainage, potable water, reuse water and sanitary sewer bounded by 12th Street Drive West and 6th Avenue West for a total of an additional 1450 L.F.

<u>Tasks</u>	<u>Estimated Cost</u>
1. Survey and Data Collection	\$9,280.00
2. 30% Design Phase	\$6,770.00
3. Conceptual Design Report	\$1,075.00
4. 60% Design Phase	\$7,060.00
5. 90% Design Phase	\$7,805.00
6. 100% Design Phase	\$3,195.00
7. Construction Services	\$4,695.00

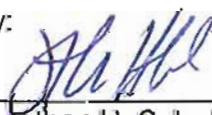

METHOD OF COMPENSATION: The compensation to the Consultant for the performance of the above identified services shall be pursuant to the Rate Schedule as defined in said Agreement, to the extent set forth as follows:

Lump Sum Fee: \$39,880.00

The Consultant agrees to perform the professional services outlined above at the method of compensation set forth above, upon receipt of authorization from the City of Palmetto.

Attest:

Secretary

Giffels- Webster Engineers, Inc.
By:  3/24/09
Jonathan H. Cole, P.E., President Date

The City of Palmetto hereby authorizes the professional services outlined above at the method of compensation set forth above.

WARD 1 – PHASE II INFRASTRUCTURE PROJECT
COP Job # 05- 436
WORK ASSIGNMENT NO. 4
CHANGE ORDER NO. 1

SCOPE OF SERVICES

PROJECT TASKS

Task 1 – Survey and Data Collection

The ENGINEER shall be responsible for collecting the data essential for the successful completion of the project. All data collected shall be evaluated for selection of design criteria and inclusion into the Report. This data may include the following:

- Survey Data
- Topographic Data
- Right-of-Way Plat Data
- Soil and Geotechnical Data from Existing Published Data
- Utility Locations
- Aerial Photographs
- Drainage Maps
- Tax Maps
- Subdivision Plat Maps
- Survey Field Notes
- Bench Mark Information
- Section Corner Reports
- Utility As-Built Drawings
- Site Visits

The CITY will provide any available information pertaining to this project. However it is the ENGINEER's responsibility to coordinate and collect data from each agency as required.

A. Horizontal and Vertical Control Surveys

Establish project baseline control ties to horizontal and vertical data and intersecting streets. Establishment of project survey baseline control shall include reference ties at intervals determined by the ENGINEER but as a minimum at 1,200 feet.

Establishment of primary vertical control from acceptable NGVD 1929 datum, including setting permanent project benchmarks at intervals not greater than 600 feet (by station).

Preparation of Project Control Survey Plans showing the baseline and benchmarks. The ENGINEER shall submit a draft of the plans to the CITY for review.

B. Topographic Surveys

Collect topographic data along the project corridor within the project limits. The surveys will generally extend to a point 10 feet beyond the existing road right-of-way (both sides). The topographic surveys will include cross sections at 100 ft intervals, profiles, drainage features, sanitary sewers and other features including buildings, fences, parking lots, driveways, curbs, walls, landscaping limits and trees 4" in diameter or larger. Sufficient spot elevations will be collected to produce a profile and determine the flow patterns to address the drainage issues.

C. Site Visit

The purpose of the site visit is to review issues raised at the preliminary plan meeting and which is the most advantageous location of the proposed facilities. Information obtained through data collection and the preliminary plan drawings shall be available, for reference during the site visit.

Photographs - The ENGINEER shall obtain color photographs of the project site. Photographs will be made continuously on the film, all facing one direction, along one side of the road, at maximum intervals of 200 feet. Separate photographs shall be taken at existing features important to the project (trees, hedges, decorative plantings, shrubbery, special storm water handling features, etc.) within and adjacent to the right-of-way. Not more than 10 additional photographs are anticipated.

Task 2 - 30% Design Phase

Preliminary plans shall be prepared and consist of the key sheet, project layout sheet, typical section sheet, plan and profile sheets, and cross sections. During this phase, the ENGINEER shall accomplish the following activities:

1. Supporting data has been obtained.
2. Project standards and variations are documented.
3. Appropriate right-of-way and other real property are identified.
4. The horizontal and vertical alignments for the mainline and side streets.
5. Existing drainage, potable water, reuse and sewer collection systems.
6. Sidewalk concepts are developed (one side of road only).
7. Basic drainage patterns are documented.
8. Other non CITY utility information. It is the Engineer's responsibility for collecting and showing utilities electronically on the plans, as provided by the utility companies.
9. A field review must be made to verify the decisions made during the development of the design such as utility conflicts, potential right-of-way needs, sidewalk connections, and special concerns for adjacent properties.

The ENGINEER shall finalize and provide the Preliminary Plans for review by CITY staff submit the Preliminary Plans to the utility companies for verification of the existing utilities shown on the plans, and provide updated information regarding the project schedule and other requirements.

Deliverables

- Preliminary Phase Plans - five (5) sets on 11" x 17" sheets.
- Preliminary estimate of construction costs.

Task 3 - Conceptual Design Report

The Final Conceptual Design Report is completed after the public information meeting, and will incorporate public comments and commitments as directed by the CITY into the Draft Conceptual Design Report.

Deliverables

- Three (3) copies of the Final Conceptual Design Report and Plans.

Task 4 – 60% Design Phase

The ENGINEER shall prepare plans that can be used to apply for the regulatory (FDEP Water & Sewer) permits. At this stage the sidewalk and utility designs are complete, within the existing rights-of-way. The ENGINEER shall prepare preliminary Utility Adjustment Plans. A second contact shall be made with the various utility companies to provide sidewalk and drainage details, and preliminary utility relocation corridors.

A. Permit Plan Phase Activities

The ENGINEER shall coordinate with the CITY for concurrence on the Preliminary Plans. This activity is to ensure that the intent of the project is being met, and the appropriate decisions go into the development of the project. The ENGINEER's quality control should include a plan checking routine for each set of activities or operations.

The major design activities include, but are not limited to, the following:

1. Sidewalk design including geometric alignment calculations
2. Potable Water line upgrades
3. Preparation of regulatory permits or exemptions (FDEP)
4. Sewer collection upgrade
5. Reuse Water line

Finalize and submit the Permit Plans to the CITY for review on the design of the sidewalk and utility elements before proceeding to the Pre-Bid Phase.

B. Stormwater Permits

The ENGINEER will prepare the data and information required at the time of permit application to apply for permit exemptions or "No Permit Required". Services to be performed shall be limited to the following:

Attend a pre-application meeting with the permitting agencies at the preliminary plans stage. The CITY shall pay any permit application fees.

Deliverables

- 60% Phase Plans – five (5) sets on 11" x 17" sheets
- FDEP Permit Application Package
- Preliminary utility adjustment plans with anticipated utility conflicts and disposition of each conflict

Task 5 – 90% Design Phase

The ENGINEER shall finalize all design for each component of the plans. At this stage the contract plans are complete pending any further review comments from the CITY or other regulatory agencies.

A. Pre-Bid Plan Phase Activities

The major design activities include completing the design for the following three plan components:

1. Utility adjustment plans to show the disposition of existing and proposed utilities.
2. Significant water and sewer relocation design for CITY utilities.
3. Sidewalk plans (one side only).

B. Specifications and CITY Technical Provisions

The ENGINEER must develop engineering designs that can be constructed, controlled, measured and paid for under the CITY Technical Provisions. In many instances these Technical Provisions may make reference to the current edition of the FDOT Standard Specifications for Road and Bridge Construction. In the event the work required is not covered by the CITY Technical Provisions, the ENGINEER must develop Supplemental Technical Provisions to be made part of the contract for this project. The ENGINEER can obtain CITY procedural guidance to assist with the preparation.

Deliverables

- 90% Construction Phase Plans – five (5) bound sets on 11" x 17" sheets
- 90% Construction Phase Plans – four (4) un-bound sets on 24" x 36" sheets
- Draft Quantity Take-off

Task 6 – 100% Design Phase

The Bid (Construction Contract) Plans include all bidding documents and all required updates and amendments required to incorporate resolutions of all written comments by the CITY.

The ENGINEER shall incorporate constructability review comments and finalize all contract documents and assist with preparation of the bid package:

1. Update plans to include any changes to right-of-way or design resulting from land acquisition
2. Update plans to include comments from constructability review

Deliverables

- Construction Phase Plans –five (5) bound sets on 11" x 17" sheets
- Construction Phase Plans – four (4) un-bound sets on 24" x 36" sheets
- Utility Contract Plans and Bid Documents

Task 7 - Construction Phase Services

The ENGINEER shall attend a pre-construction conference and may provide clarifications of plans and specifications as questions arise. CITY will provide to ENGINEER a certified as-built survey of the constructed project. ENGINEER will prepare as-built plans.

It shall be the responsibility of the ENGINEER to provide services necessary to assure that the project is constructed in reasonable conformity with the plans, specifications, and contract provisions. For this task no more than 24-hours of travel time & on-site inspection services will be provided.

The services of the ENGINEER under this task include the following:

1. Assist the CITY with interpretation of the plans, specifications, contract provisions and review and approval shop drawings. The ENGINEER shall consult with the CITY when an interpretation involves complex issues or may impact the cost and duration of performing the work.
2. Assist the CITY with analyzing changes to the plans, specification, or contract provisions and extra work which appears to be necessary to carry out the intent of the contract. The ENGINEER will assist the CITY to determine if a change or extra work is necessary and such work is within the scope and intent of the original contract. Recommend such changes to the CITY for approval.
3. Assist the CITY with monitoring the project to the extent necessary to determine whether construction activities violate the requirements of the permits. Notify the Contractor of any violations or potential violations and require his immediate resolution of the problem.

4. Upon completion of construction the ENGINEER shall forward to the agencies record drawings (prepared by others) from certified as-built record drawings as provided by the Contractor. The ENGINEER shall prepare the required certification of completion letters to Florida Department of Environmental Protection (FDEP), CITY certifications for Utility work and other permitting agencies as required.

A. Survey Control

The Contractor will be responsible for the layout of construction. Certified Record drawings (as-builts) will be supplied to the ENGINEER upon completion.

Task 7 - Deliverables:

- Certificate of completion letters based on Record drawings prepared by others for the respective agencies.

END OF SCOPE

GIFFELS-WEBSTER ENGINEERS, INC.

Key Personnel

Consultant is proposing to utilize the following key project personnel for this effort:

Team Member	Project Role
Jonathan H. Cole, P.E.	Principal In Charge
Andrew Wickerson, P.E.	Project Engineer
Steve Torchia	Project Manager
Tom Giorgetti	Data Collection

SUB CONSULTANTS:

Landmark Land Consultants

Project Schedule

Consultant is prepared to commence work on this project within seven days of receipt of notice to proceed. At this time, design services are anticipated to be completed within nine (9) months from the Notice to Proceed.
